
New Jersey Center for Prostate Cancer & Urology Among First in Nation to Treat Advanced Prostate Cancer Patients with PROVENGE®

New Jersey Center for Prostate Cancer & Urology is among the first sites in the nation to treat advanced prostate cancer patients with PROVENGE (sipuleucel-T), the first in a new therapeutic class known as autologous cellular immunotherapies. PROVENGE was approved by the U.S. Food and Drug Administration (FDA) for the treatment of men with asymptomatic or minimally symptomatic metastatic castrate resistant (hormone refractory) prostate cancer and is made by Dendreon Corporation.

“PROVENGE is a revolutionary new treatment that may lead to similar personalized therapies in other cancer types,” said Dr. Vincent Lanteri of NJ Center for Prostate Cancer & Urology, “We are pleased to have a new option to offer our patients and to be selected as one of the first facilities treating men with this important new therapy.”

“PROVENGE allows patients to use their own cells to help fight cancer,” said Dr. Michael Esposito. Patients with advanced prostate cancer now have a new option to prolong their lives. I’m very excited about this and have high hopes for it.”

PROVENGE is an autologous (made from a patient’s own immune cells) cellular immunotherapy designed to stimulate a patient’s immune system to identify and target prostate cancer cells. Each dose is manufactured specifically for each patient using his immune cells.

APPROVED INFUSION SITE

PROVENGE Safety

PROVENGE is intended solely for autologous use and is not routinely tested for transmissible infectious diseases.

In controlled clinical trials, serious adverse events reported in the PROVENGE group included acute infusion reactions (occurring within 1 day of infusion) and cerebrovascular events. Severe (Grade 3) acute infusion reactions were reported in 3.5% of patients in the PROVENGE group. Reactions included chills, fever,

fatigue, asthenia, dyspnea, hypoxia, bronchospasm, dizziness, headache, hypertension, muscle ache, nausea, and vomiting. No Grade 4 or 5 acute infusion reactions were reported in patients in the PROVENGE group.

The most common adverse events (incidence $\geq 15\%$) reported in the PROVENGE group are chills, fatigue, fever, back pain, nausea, joint ache, and headache.

About Prostate Cancer

According to the American Cancer Society, prostate cancer is the most common non-skin cancer in the United States and the third most common cancer worldwide. More than two million men in the United States have prostate cancer, with an estimated 217,730 new cases and approximately 32,050 men expected to die from the disease in 2010.

Individuals interested in learning whether PROVENGE is an appropriate treatment option should contact New Jersey Center for Prostate Cancer & Urology or visit www.PROVENGE.com.
